

e-Order for Microsoft Dynamics GP: Enabling Dynamics GP installations to process internet sales, customer orders, stock enquiries and similar transactions in a web environment.

Overview

Our company, NetEncore, works to solve the needs of medium-sized businesses that operate in the area of product sales and distribution.

Our company's product, e-Order for Microsoft Dynamics GP, is an enterprise application used to optimize customer sales in a web environment.

Businesses enjoy the following benefits from using our product:

- Increased sales – product information available online
- Better service – online access anytime, anywhere
- Improved accuracy and reduced overheads – clients enter their own transactions
- Flexibility – product customization to meet specific business needs
- Secure and scalable – multi-tiered architecture utilizing latest Microsoft .NET technology

With e-Order for Microsoft Dynamics GP businesses can allow their clients to search their GP inventory, build orders, review sales history and generate reports. These capabilities result in increased sales through greater product information, more timely access and improved accuracy of client transactions.

Unlike other products our e-Order web solution is supported by a propriety content management system which makes it easy to customize and include specific business needs.

Features

e-Order for Microsoft Dynamics GP includes the following features:-

- Dynamics GP inventory search and order construction
- Inventory item images and additional text
- Automatic & manual Lot/Bin quantity allocation
- Item pricing, quantity on hand and back order details
